

Daily Electronic Water Timer User Instructions

Batteries

Install 2 AA Alkaline batteries by removing the battery holder from the back of the timer and inserting the batteries as indicated. Replace the battery holder.

Attaching the Timer to the Faucet

Attach the timer to the faucet. The nut should be snug. Do not overtighten. Once the timer is attached, turn on the faucet and leave it on while the timer is attached. Remember to turn off the water when you need to remove the timer. Attach a garden hose to the outlet end of the timer and then set up a sprinkler as you normally would.

Setting the Timer

The timer will water once a day, everyday, at the same time. You need to set up the timer at the time-of-day you want to water.

- Turn knob to the desired duration (How long you want to water).
- Press and hold the **“Enter”** button for 2 seconds.
- Release button when the LED blinks.

The timer valve will open immediately. After the set duration has passed, the valve will close and watering will stop. Every day, at the same time, the valve will again open for the set duration.

Watering Manually

- Press the **“Manual On/Off”** button to water manually.
- Press the button again to stop watering.
- If you do not manually stop the water, the timer will water for 30 minutes and automatically shut off.
- Pressing the **“Manual On/Off”** button during automatic watering will turn off the watering until the following day.

Low Battery

The LED will blink continuously if the batteries are low. If this occurs during a watering program, the unit will automatically shut off and discontinue running the program. **After inserting a new battery, the timer must be reset to resume watering.**

Modifying the Watering Duration

Turn knob to newly desired duration (How long you want to water) but **DO NOT** press the enter button. At the next watering time, the timer will water for the new duration. **This change can be made at any time and will take effect at the next start watering time.**

Modifying the Watering Start Time

To modify the start-water time simply repeat **“Setting the Timer.”**
